Mr.Newhouse

I was at the meeting this week and was surprised to hear you say that the there had been many SUP passed by the planning commission in the past with setback reduced do to fencing or berms!
Sir, if you had taken the time to see my property like I had requested at every meeting you and other commissioner would understand That 350' from property line is not unreasonable! Even with a 8' berm the panels will be seen from my home. And as for the heat island I sent MrWhite a study done that the change in temperature is 28'
above and 700' out side and 900' depending on the wind!
I have sent copy's of the Kingston standards for large solar facility.
This study was in 2015 and it was to protect its citizens.This Spotsylvania solar facility with any other distance would put my Family in harms way,(from the known and unknown) on a solar facility of this size.
For every study that goes one way there is one that goes the other!
We are setting a president on things to come! And we all know that every county in the country are looking at Spotsylvania This is a industral project in a rural setting for this reason larger setbacks and berms SOULD be installed to keep the rural look of Spotsylvania County and our History.

Thank You
Michael OBier
